VideoIP™ Architecture

VideoIP™ 8000 Features

VideoIP Customer Care

UNIX-based Service Management System (SMS) for centrally provision and manage IP video services including applications for fault, configuration, performance and accounting

Communicates with and manages VideoIP 1000 switches via SNMP V2

VideoIP Network Management

Browser-based system for subscribers

Ad-hoc or timed SLA reports

Self-provisioning and policy management

VideoIP™ 8000 Features

Video Firewall Services

High-performance H.323 proxy/gatekeeper enabling secure incoming and outgoing call resolution
30-100 simultaneous calls at 1.5 Mb/s full-duplex bandwidth

Video NAT Services

Enabling NAT/PAT services for H.323 datastreams

Video Policy Engine

IP-level policy management using source/destination IP and port information

Session-level policy management using authentication, per-user maximum bandwidth, incoming/outgoing calling, audio/video, time-of-day, and encryption

VideoIP™ 8000 Features

Video QoS Services

SLA Monitoring
MPLS support

Video Encryption Services

Support of encrypted tunnels for video communication

Video Bandwidth Management Services

Configuration of aggregate, per-user and per-session bandwidth

Wire-speed Switching

Built-in IP routing capability (OSPF, BGP, RIP)

Maximum aggregate OC-3 (155 Mbps) bandwidth per switch

Interfaces

LAN: 10BT, 100BT, 1000BT and WAN: OC-3 ATM, DS-3
